

I have been thinking about the future of engineering in New Zealand. It's a time of great change and opportunity. We need to ensure that our engineering education is not only world-class but also reflects the values and needs of our country.

The University of Canterbury has a long and proud history of producing exceptional engineers. Our graduates are known for their innovation, problem-solving skills, and commitment to excellence. As we look towards the future, we must continue to invest in our students, providing them with the latest knowledge and skills they need to succeed in a rapidly evolving industry.

We must also ensure that our engineering education is inclusive and accessible to all. We need to attract and support students from diverse backgrounds, ensuring that they have the resources and support they need to thrive. This is not just a matter of social justice, but also of national development. Our engineering sector is the backbone of our economy, and we need a diverse and skilled workforce to drive its growth.

In conclusion, the future of engineering in New Zealand is bright, but it requires our collective effort. We must work together to ensure that our engineering education is of the highest quality, that it is inclusive and accessible, and that it prepares our graduates for the challenges and opportunities of the future.
